

**Short Throw Latch**

**Long Throw Latch**

There are two slam latch variations used by Fleming Sales. The long throw latch is currently being designed into drawers using 3/4" thick slides.

Earlier versions of drawers with 3/4" thick slides and short throw latches are being updated to use the long throw latch.

This will facilitate easier installation or replacement of new latches due to interference with the sides of the tray with mounting bolts or rivets. To determine which latch your tray uses, please reference the drawing to the left.
